

ACSIS

Your tool for predictive maintenance

*Let us save
your money!*

Avoid AOGs

- Get immediate ALERT messages
- Visualize your AC/ Fleet status in one single diagram
- Recognize if it is a single tailsign or a fleet problem

Delay Probabilty Tool

- Calculation of the probability for a delay due to a certain problem on a specific aircraft to happen during/ prior next flight
- Maintenance teams can be prepared with tools, material and personnel before it comes to a delay or even an AOG

Real Time Monitoring

- ACSIS monitors all system defects, analyses data from pilot and maintenance reports and decides what your problems are
- Numerous, easy to understand, technical history diagrams that give a perfect troubleshooting overview at a glance

Enhance Safety

- ACSIS uses sophisticated algorithms which are far more accurate than standard alert levels per ATA
- Comprehensive reports for your engineering and CAA at a click of a button
