

Aircraft Fleet View

UP-TO-DATE VIEW OF FLEET STATUS

Aircraft Fleet View is an App that gives you an always up-to-date view on your airline's fleet status.

Aircraft Fleet View indicates AOGs, delays and other important information. It provides the right level of detail to be useful but not crowded with information. Individual color-schemes in accordance with the corporate identity of the airline are possible.

The Aircraft Fleet View app is meant for the management of an airline that wants to get a general overview over the status of their fleet. It can also be used by pilots to check the status of the aircraft they are going to fly next. Maintenance can also profit from a quick overview to take immediate actions when needed.

Aircraft Fleet View can be used in addition to other paperless tools like EFB and ETL.

By selecting the relevant menu in the app, you get more details on:

- **Aircraft Status:** Every aircraft (or a defined range of fleet) is represented by a separate card. Different colors (configurable) show immediately which aircraft are ok and which are facing a problem.
- **Workorder Status:** Shows all your aircraft for which workorders are issued.
- **Events:** Shows all your aircraft which have e.g. an AOG. You can also define other events to be shown in the overview.
