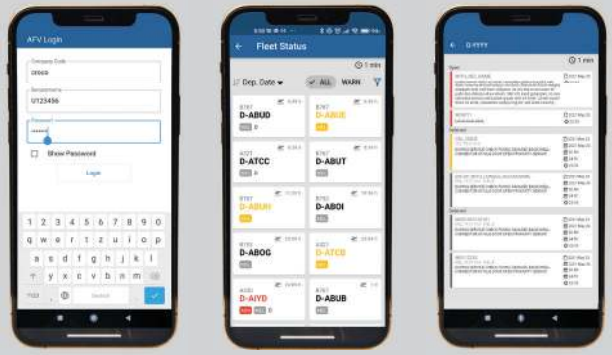
# Aircraft Fleet View



**Aircraft Fleet View is an App that gives you an always up-to-date view on your airline's fleet status.**

Aircraft Fleet View indicates AOGs, delays and other important information. It provides the right level of detail to be useful but not crowded with information. Individual color-schemes in accordance with the corporate identity of your airline are, of course, possible.

The Aircraft Fleet View app is meant for the management of an airline that wants to get a general overview over the status of their fleet. It can also be used by a pilot sitting in the hotel who just wants to have a look on the status of the aircraft he/she is going to fly next.

The app is easy to use and can be used in addition to other paperless tools like EFB and ETL.

**By selecting the relevant menu, you get more details on:**

- A/C Status: Every aircraft (or a defined range of fleet) is represented by a separate card. Different colors (configurable) show immediately which A/C are ok and which are facing a problem.
- W/O Status: Shows all your A/C for which workorders are issued.
- Events: Shows all your A/C which have e.g. an AOG. You can also define other events to be shown in this overview.
